### LEAN, SIX SIGMA, AND PROCESS IMPROVEMENT: FUNDAMENTALS, METHODS, AND APPLICATIONS FOR LAB PROFESSIONALS" WORKSHOP

Lab Quality Confab and Process Improvement Institute New Orleans October 23, 2014

BUSINESS IMPROVEMENT GROUP LLC

### Agenda

- Introductions
- Lean Business System Overview
- What Results Should You Expect?
- Batch vs. Lean?
- Lean Business System Tools BASICS
- Lean And Change Management
- Linkage To Customer Value
- Lean Video Examples
- Lean Exercises
- What Is An Improvement You Can Make When You Return?

### Why Lean?

### Lean Gets Results!

©2014 Business Improvement Group LLC

### **Overall Lean ED Metrics Summary - 2012**

Baseline	
<ul> <li>Staff Hours</li> </ul>	145
<ul> <li>Volume (patients per day)</li> </ul>	71.2
• D2D (Minutes)	53 min
Lean Track March	
Staff Hours	159
<ul> <li>Volume patients per day</li> </ul>	72
• D2D (Minutes) (42% reduction)	22.65
Lean on Acute Track	
<ul> <li>Staff Hours</li> </ul>	159
<ul> <li>Volume (patients / day)</li> </ul>	77.6
• D2D (Minutes) (47% reduction)	27.9

#### Company X - Meeting Results - 2001

- Production meetings cut from 4 hours a week to 55 minutes
- Cut Finance meetings in <sup>1</sup>/<sub>2</sub>, 2 ea. 1 hour meetings to 45 minutes
- BDT's meeting cut from 3 hours/week to 3 hours every other week
- Forecasting process cut from <sup>3</sup>/<sub>4</sub> day to 2 hours
- HR cut meetings from  $1\frac{1}{2}$  hours to 1 hour.
- IT cut several meetings in ½ yielding 500 hours savings.

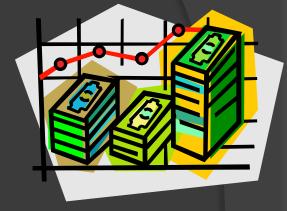

### **Total Annual Savings 4,578 hours**

©2014 Business Improvement Group LLC

### Typical Results Yielded through Lean

Up to:

- 90% through put time reductions
- 20-70% increases in productivity
- 90% reductions in inventory
- 95% reductions in Travel Distance
- 10% or more reduction in defects
- 30% reductions in overhead activities
- Significant returns on consulting fees

Anyone you dedicate to continuous improvement will pay for themselves 10X

#### Implementations Are <u>Budgeted</u> But <u>Self Funding</u>!

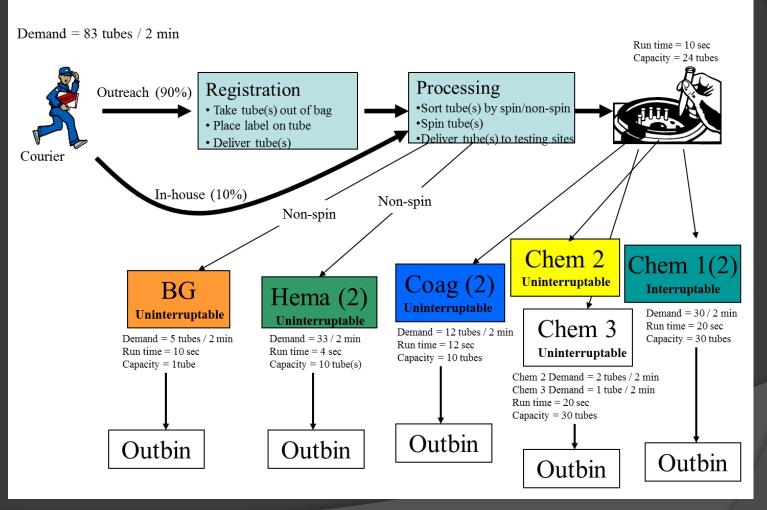

### What is Batch?

### What is Lean?

©2014 Business Improvement Group LLC

### **Batch Exercise**

#### Lab Game Process

### **Batch Environment**

# What are the typical characteristics of a **BATCH** environment?

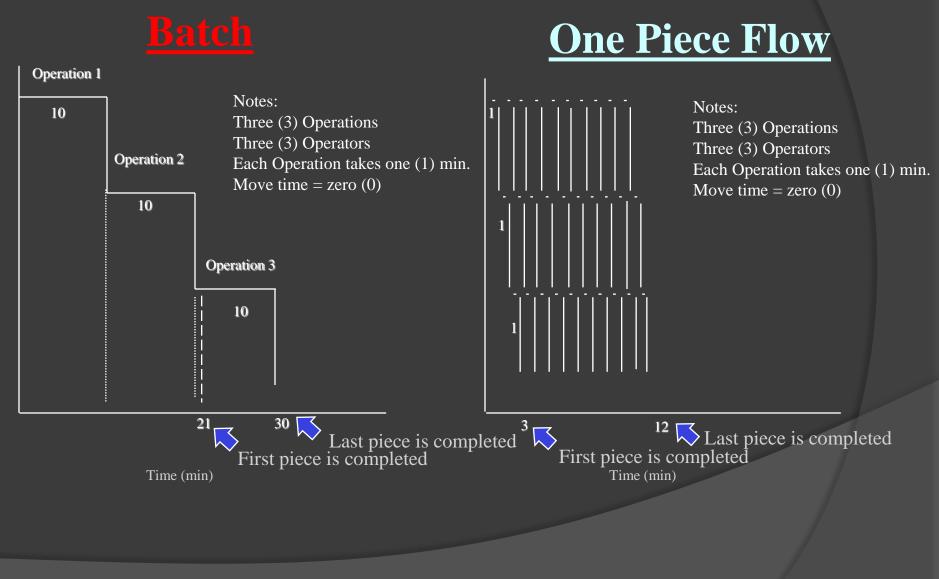

Video

### Video on Batching

©2014 Business Improvement Group LLC

### One Piece Flow vs. Batch

### 8 Root Causes of Batch

- 1. Your Minds
- 2. Setups
- 3. Travel Distance
- 4. Equipment
- 5. Process
- 6. Idle Time
- 7. Space
- 8. Variation

When you are working on something you don't need... You can't work on something you do need!

### Variation is the enemy of Lean!

©2014 Business Improvement Group LLC

### Today's Realities...

Our Customers Are Continuously Demanding:

- Higher Quality
- Better Service
- Shorter Lead Times
- Lower Prices
- Faster Response
   Times

Our Businesses Must Grow, but Space and Manpower Cannot:

- Major shortages of qualified personnel
- Skilled labor costs are increasing
- Space is expensive
- Personnel Education & Training is expensive

#### Our Markets Are Becoming More Competitive Both Nationally And Globally!

### What is the Change We are Making?

The "change" is converting from a **Batch** based system to a Lean thinking based system

### Back to Zero

#### **Group Exercise**

- 1. What event or occurrence could set your organization back to zero?
- 2. "What is impossible to do in your business today, but, if it could be done, would fundamentally change it for the better?"

• CONCEPT 6.

When a paradigm shifts, everyone goes back to ZERO!

©2014 Business Improvement Group LLC

### Thinking Lean... Lean is... Small... Incremental... Continuous Improvement

### Lean Definition:

Increasing Customer Value by Eliminating Waste Throughout the Value Stream\*

Would You Believe 75 - 95% of what you are doing now is Wastel

### It can't possibly cost you more money to do something in 4 hours that now takes 4 days

\* Based on definition in the book Lean Thinking, Womack & Jones, Simon & Schuster ©2014 Business Improvement Group LLC LAB CONFAB Oct 2014

### Lean Mission Statement

### **TO SEEK OUT** NEW WASTE **AND DESTROY IT!**

Waste Is Like A Virus. It Has The Capacity To:

- Grow Invisibly And Multiply
- Contributes To Poor Customer Service
- Reduces Customer Satisfaction
- Raise Our Costs but Provides No Value Added
- Causes Defects In Our Processes

#### Waste is like a Virus... It threatens all our Jobs! Inspired by Mark Jamrog, SMC Group

### The Eight Wastes in Healthcare

- Waste of overproduction
- Waste of idle / wait time
- Waste of transportation
- Waste of over processing
- Waste of inventory
- Waste of movement
- Waste of defects
- Waste of talent

The largest and most difficult waste to find is time ... and once you waste time, you can never get it back

Henry Ford

Source: Taiichi Ohno - Toyota Seven Wastes

### How Do We Find Waste?

#### ctual Part

ctual Place

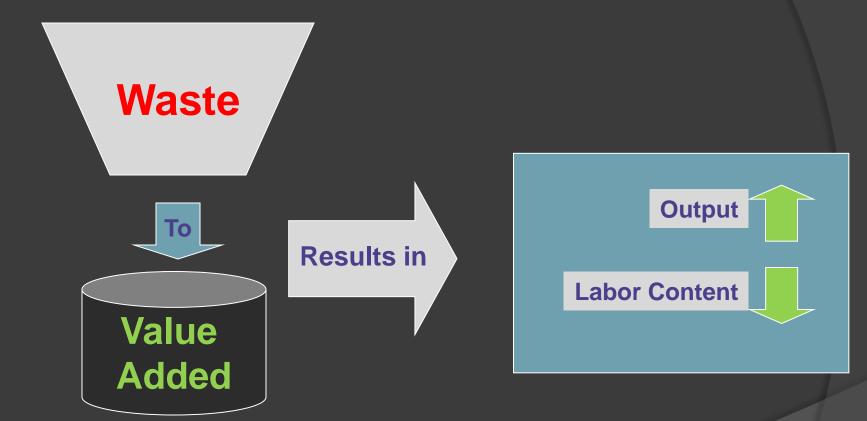

#### ctual Situation

Today's Homework: Go back and see how many of the eight wastes you can identify in your area!

Source: Powered by Honda, Nelson Mayo Moody, John Wiley and Sons, ©1998

©2014 Business Improvement Group LLC

### Batch to Lean Waste Conversion Formula A Lean Business Delivery System<sup>™</sup> converts:

### Significant Increases to Productivity and Will Make Your Job of Managing Easier!

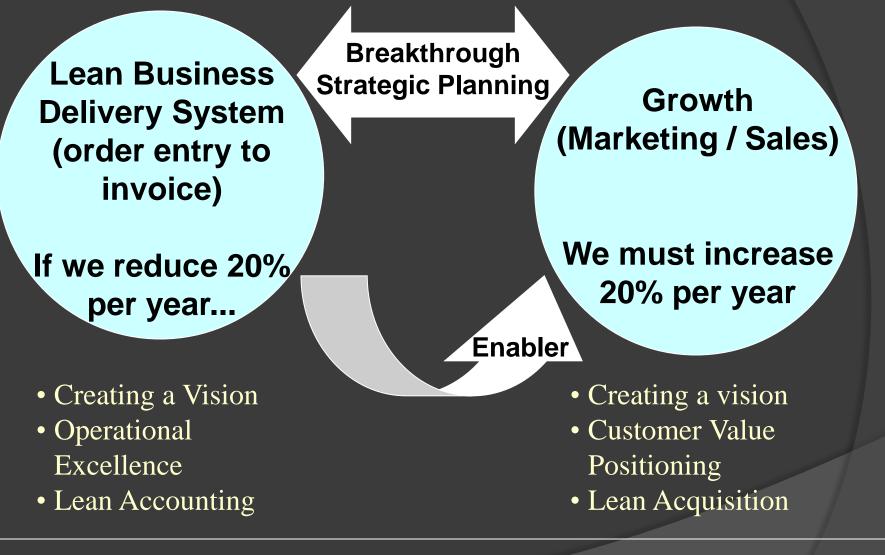

©2014 Business Improvement Group LLC

### Changing Cost Philosophy

## 15 Cost Reduction

### Goal: To Create The Highest Paying Positions With The Lowest Overall Labor Cost!

### **Business System from a Leadership Perspective**

#### We must look at the overall business as a system!

©2014 Business Improvement Group LLC

### Lean Cash Flow Goal

### Lean Formula

Convert WASIE to CASH

### **Present Capacity = Work + Waste**

©2014 Business Improvement Group LLC

### Lean & Your Customer

### Lean Helps You to Identify "Value" from the Customer's Point of View!

### **Fundamental Lean Goal**

**Provide The Highest Quality** Value Added Patient Care With The Optimal Cost In The Shortest Time With A Great **Hospital Experience!** 

### Lean is Customer Focused!

### The Lean View Point

Lean Forces You To Look At Things Differently. **Once You Get The** Lean Customer Value Added Paradigm... You Will Never Be The Same

### Lean & Change Lean = Paradigm Shift!

### As always there will be some resistance to change!

©2014 Business Improvement Group LLC

### Why Change?

- What is the option?
- We are all interconnected but not typically measured that way

- Is your department "World Class?" What about all the departments you impact?
- How many of you are satisfied with your current processes? Did you create that process?

### Success Breeds Complacency

©2014 Business Improvement Group LLC

### The Change Equation

- Do We Have a Compelling Need to Change:
  - What is your patient satisfaction score?
  - What is your average LOS?
  - How long does your patient wait?
  - What is your turnover time between patients?
  - Are you satisfied with your results?

### What is the Right Thing To Do for our Patients?

©2014 Business Improvement Group LLC

RESET

esistance to

Change

#### **Complacency Test**

- When was the last time you made an improvement to your process?
- What is your average implemented suggestions per month from your employees?
- How often do you say "It can't be done", "Management won't let me...", "I can't get money..." "We tried that before..."
- We don't need to get any better...
- My Department's metrics look great... What does it matter that we impacted the other department... That's their problem!
- I'm tired of hearing about customer satisfaction issues... we know we have problems... we will fix them when we get that new facility with more beds and space"
- I can't make any changes because.....

### Whining

#### Are You Complacent?

Toyota Suggestion Rate is \_\_\_\_\_ Suggestions Per Month Per Employee With a \_\_\_\_% Implementation Rate!

©2014 Business Improvement Group LLC

LAB CONFAB Oct 2014

#### What People Want To Know

- What is the change?
- What are the tools we use to make the change?
- Why are we changing?
- How will it affect me?
  - Now? Future? Job? Personally?
- How will it affect the organization?
  - Now? Future?
- What's in if for me if I go along with the change?
  - Now? Future?
- What's in it for the organization?

## Communication is essential!

©2014 Business Improvement Group LLC

LAB CONFAB Oct 2014

#### **Barriers to Implementing World Class**

Education, Training, & Patience

Can't ... It Won't Work.... OUR I Already Know.... WAY Won't Work Here... Tried that before... I don't want to run it that way... You are going to do it anyway...

#### The Only Limiting Factor Is Your Mind!

#### Most Loved Words

- What if we could.....
- What if we tried.....
- How can we....
- I know we can....
- I saw someone else doing it..
- Why didn't it work the last time...
- When was the last time we tried....
- Maybe the manufacturer can help us...
- Let's benchmark a company that is doing that way...
- Let's take the best from YOUR WAY and MY WAY and make it OUR WAY...

# Brainstorming is the TQ tool that overcomes the "I Can't" Syndrome?

©2014 Business Improvement Group LLC

## Lean Tools There are a lot of pieces... The KEY is to build a culture that integrates all of them!

#### Lean Tools Application Process – BASICS

- 1. Baseline
- 2. Analyze / Assess
- 3. Suggest Solutions
- 4. Implement
- 5. Check
- 6. Sustain

Manage By Fact!

#### Let the Data do the Talking! Baldridge and Shingo Prize Aligned with Focus on 6<sup>th and all</sup> Criteria with Iterations of Improvement

LAB CONFAB Oct 2014

### Lean... Hard At Work

#### **Definitions - Value Added**

#### Value Added

- O Physically changes the product / patient
- Customer cares about it
- One right the first time

#### Non Value-Added, but Necessary

 It must be done based on our current processes TODAY, but does not meet all three (3) criteria above

### You Must Look at Value Added From the Eyes of Your Customer!

©2014 Business Improvement Group LLC

The New Customer Driven Economy
Everything Starts With the Voice of the Customer
Customer Surveys
Customer Demand
Customer Expectations

Do You Know What Your Customer Wants?

#### Production Smoothing / Tact Time

Customer Demand = 21,000 Tubes/ Week = 3,000 / Day

TT = Available Time / Customer Demand

Available Time =

<u>1440 min/day</u> 3,000 /day

= 28.8 secondsThis is equal to:Approx 2 tubes per minute

### Identify & Rank Improvement Opportunities

- After reviewing and designing the "Future State" process, list the opportunities to improve process speed.
- Rank the effect of each opportunity based on impact to the strategic planning goals.
- Rank the risk and impact to other departments for each solution.
- Create and action item/ project list for improvements.

	et Selection - Prioritization Matrix

# Why Standard Work?

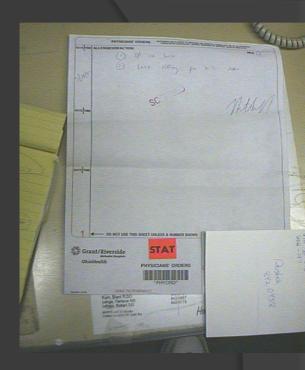

3

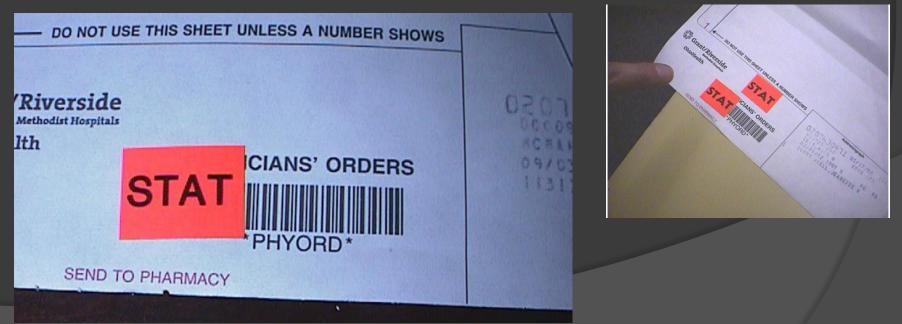

Busine

ONFAB Oct 2014

## What Is Standard Work

# Sequence of Operations Cycle Time Standard Work In Process

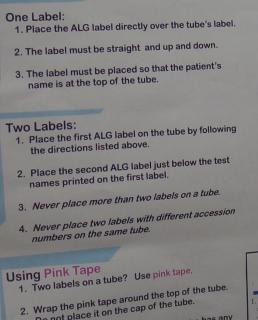

#### Work Instruction

Grant/Riverside Outreach Laboratory

#### How To Label A Tube

- Do not place it on the cap of the tube. 3. If the ALG label for a lavender top tube has any
  - test in addition to a CBC and Diff, wrap a pink tape around the top of the tube.
  - Example: CBC, Diff, GlyHgb = Pink tape

Labeling Tubes With Requisition Labels Requisition labels should be placed ver the tube's lab

ALG labels may cover the requ

Work instructions are different from standard work. They do not include times for each step.

2 = 2003

#### **Registration Standard Work Example**

	1.	Take tubes, labels, and caps out of bags	3 seconds
ed tubes are STAT	2.	Place testing label on tube per visual sample on this form.	3 seconds
lear Tubes are ormal processing		a) Note: Quality Step – It is very important that the label be 2 inches from the bottom of the tube in order for the testing machines to rea the labels. If the label is more than 1/8 inch off in either direction, it cannot be read.	e Id
	3.	If it is a Stat tube, then place a red sticker direct above the test sticker and under the cap.	ily 4 seconds
		a) Note: Quality Step - There needs to be a <sup>1</sup> / <sub>4</sub> inch clearance between the stat label and th cap and the stat label and the testing sticke	
	4.	If the tube has a number on the bottom, record the time on the strip provided and place it in the tube.	5 seconds
	5.	Place cap on top of the tube	2 agoanda
	6.	Put tube back in the bag	3 seconds
		a) Note: if there are multiple tubes per bag, the these steps must be completed until all the tubes are in the bag.	
25	7.	tubes are in the bag. Deliver the bag to processing	5 seconds
		Deriver the bag to processing	Total 26 seconds

## Visual Work Area Definition

#### A work area that is:

- Self-explaining
- Self-regulating
- Self-improving

Where what is <u>supposed</u> to happen, <u>does</u> happen, on time, every time.

Techniques that help us understand and <u>make visible</u> what's happening in our workplace so that we can <u>act</u> <u>on fact</u> to achieve better results.

## "Management By Sight"

## **5S The Groundwork for Improvement**

#### Purpose

Methodology for creating and maintaining an organized, clean and safe high performance workplace.

#### Steps

- Sort (Seiri)
  - Solution State State
- Storage (Seiton)
  - ▷ Arrange and Identify for ease of use, organize
- Shine (Seiso)
  - $\boxtimes$  Clean Daily. Clean up everything that's left
- Standardize (Seiketsu)
  - ➢ Eliminate cause, make standards obvious
- Sustain (Shitsuke)
  - Set discipline, plan, schedule, Train... AND STICK TO IT

#### 10 Second Rule

## Benefits of 5S

- When you clean you find problems
- A cleaner workplace is a safer workplace
- Contributes to how we feel about our product, process, our company and ourselves
- Provides a customer showcase to promote our business
- Product quality & especially contaminants will improve
- Efficiency will increase

# 5S programs deliver bottom line results with minimum investment

#### Hematology Pilot Results:

#### PRODUCT PROCESS FLOW DETAILED ANALYSIS Product: FLUIDS

Inpt Boundary Receipt in Lab

Outpt Boundary Result

	Initial	Pilot	Reduction	% Reduction
Total Steps	125	48	77.00	62%
Orig Seconds	4327	1711	2616.00	60%
Min	72.1	28.5	43.60	60%
Hours	1.2	0.5	0.70	58%
Days	0.1	0.02	0.08	80%
Distance	633.5	50.7	582.80	92%
Value Added	32.22%	64.12%	-0.32	99%
Non-Value Added	1.62%	0.76%	0.01	53%
Storage	59.42%	9.92%	0.50	83%
Inspect	0%	0.04%	0.00	
Transport	6.75%	1.98%	0.05	71%

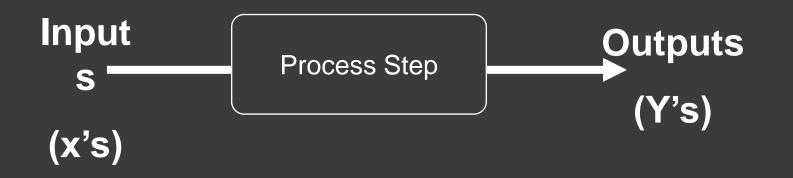

- Re-Laid out area and consolidated printers for the Stago and the Atlas
- Operators Loved It
- Added muffin fan to dry slides quicker

#### **Total Quality Tools**

# Six Sigma There are a lot of pieces... The KEY is to build a culture that integrates all of them!

## Inputs & Outputs

• The basic foundation of process improvement.

- Y's are the results of completing the process step.
- x's are the inputs that impact the ability to achieve the Y's of that process step.
- (A Y from one process can be an x for a later process)

#### Do you know your BIG Y?

#### **Root Causes Drivers**

We separate variation into common cause & special cause

- Common Cause is global: system, process, product design, machine
- Special Cause is local: time, conditions, operator

## Can You Distinguish Between Special Cause vs. Common Cause?

## **Practical Meaning of 99%**

#### **Three Sigma equals:**

- 20,000 lost articles of mail per hour
- More than 300,000 babies accidentally dropped by doctors and nurses each year
- If your heart is 99.9% perfect, it means you're in cardiac arrest nine (9) hours each year
- Unsafe drinking water nearly 15 minutes per day or four whole days each year
- 5,000 incorrect surgical operations per week
- 2 short or long landings at most major airports each day
- 200,000 incorrectly filled prescriptions every year
- No electricity for almost 7 hours each month

#### Sigma ppms and percents\*

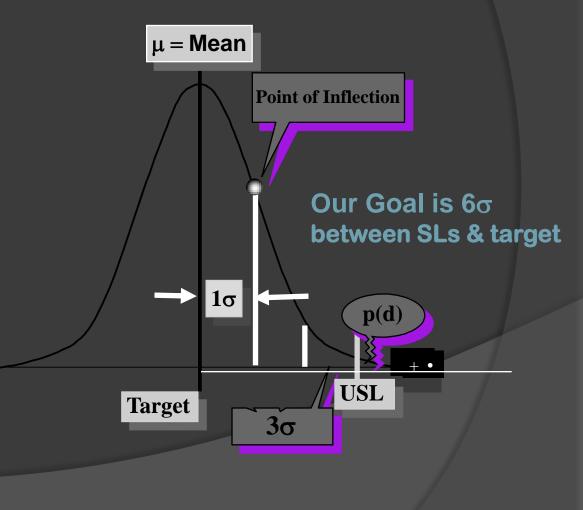

Six Sigma is equal to 3.4ppm or 99.99966 %) Three Sigma (average) equals 6,210 - 66,810 ppm, 99.7 % One Sigma equals 88% (our heights) within standard deviation

\*(with 1.5 sigma shift)

## Variation: Common & Special Cause

- We separate variation into common cause & special cause
- Common Cause is global: system, process, product design, machine
- Special Cause is local: time, conditions, operator

 Control charts can separate common from special cause

## Special vs. Common Cause

- "A fault in the interpretation of observations, seen everywhere, is to suppose that every event (defect, mistake, accident) is attributable to someone (usually the nearest at hand), or is related to some special event. The fact is that *most* troubles with service and production *lie in the system*. Sometimes the fault is indeed local, attributable to someone on the job or not on the job when he should be.
- We speak of <u>faults of the system as common causes</u> of trouble, and <u>faults from fleeting events as special causes</u>."
- W. Edwards Deming

## **Blaming Just Hides the Problems**

## **Quality Myths**

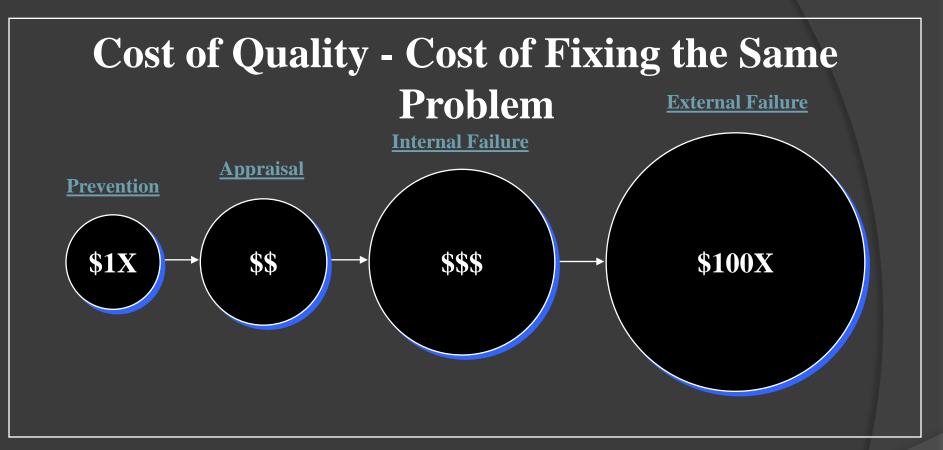

- Taking longer makes it better
- Shorter cycles require more resources
- The more steps in the process the better
- If it's not working, throw more people and materials at it
- More people and time will make it just right
- If it ain't broke, don't fix it.

## **Quality Truths**

- Reduced steps represent less opportunities for defects
- Shorter cycle times improve quality
- Shorter cycle times increase our effectiveness
- Shorter cycle times increase our feedback time opportunity.
- You can not inspect quality into a system; it must be designed into the system
- People are at best 2 to 3 sigma... people make mistakes
- Less people are less opportunities for errors
- We are victims of our existing quality "SYTEMs" Deming

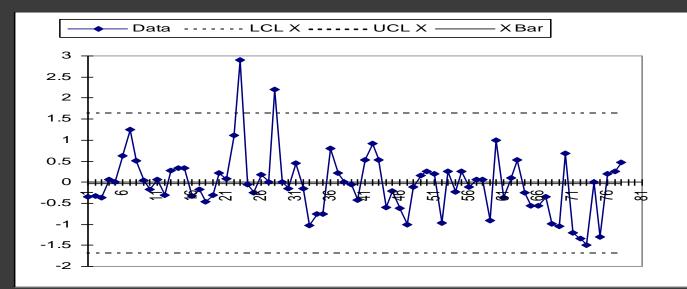

Systems can be 100% mistake proofed. Zero defects is possible but not with sampling inspection. 100% inspection combined with processes "under control", and preventing defects at the source are the only ways to attain zero defects

#### ABM Highlights The Cost Of Quality

The Earlier we Catch the Problem the Better! Remember... Waste is like a Virus. The longer it festers the more of a toll it takes on you.

## **Control Chart Example**

#### Separates Common & Special Cause

- Real Time/Operator Owned SPC/Pareto charts
- Eliminates line down time due to common cause
- Frees OE Resources to work common cause improvements

#### **Control Plans Dictates Special or Common Cause Actions**

Can you identify the special cause variation ?

How much is common cause variation ?

When did the process change ?

Should you have to look at control charts to know when the process has changed ?

#### **Questions Most Asked**

#### How do we Integrate the Six Sigma and Lean Manufacturing Tools?

#### How do we Best Utilize our Black Belt and Lean Manufacturing Specialists with Integrated Projects?

#### <u>Lean</u>

Flow & Improvement

Waste Elimination

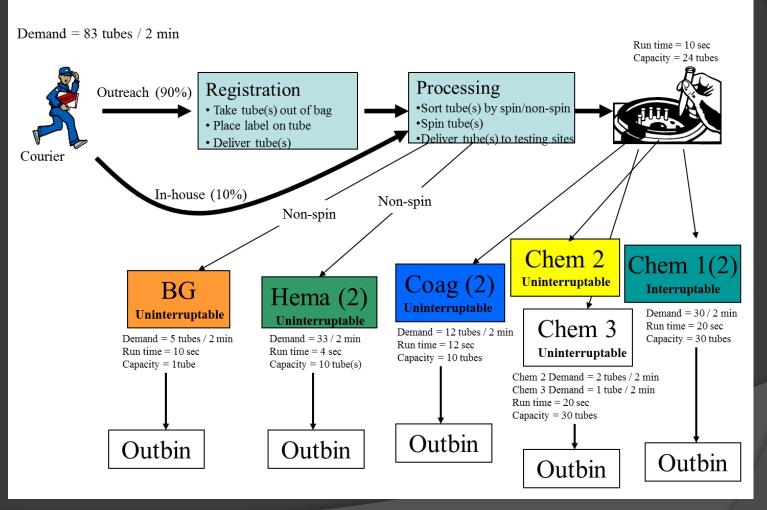

#### Six Sigma

Continuous Quality Lean = Zero Defects

We implement Lean first which stabilizes the area and highlights six sigma projects to reduce variation

#### Lean Exercise

#### Lab Game Process

### 10 Keys to Lean Success

- 1. Top-management commitment
- 2. Communication
- 3. Dedicated resources
- 4. Training
- 5. Get people involved
- 6. Maintain intensity Compelling Need to Change
- 7. No layoffs due to Continuous Improvement
- 8. Share the wealth
- 9. Frequent review of progress
- 10. Track performance

#### Drive Lean Through the Line Organization – Support with *Dedicated Resources*

©2014 Business Improvement Group LLC

## **To Implement Lean Takes:**

- Great courage
- Conviction
- Faith
- Output States of the states
- Innovation (Today's Problems Came From Yesterday's Solutions)
- Patience and Impatience
- Resources (preferably dedicated)
- Some financial investment
- Someone to walk you through it the first time
- Strong, committed senior leadership team

Imagine The Pioneers Crossing This Great Continent!

#### You have to provide the "Compelling Reason" to Change!

©2014 Business Improvement Group LLC

## What Can I Do When I Go Back

- Make an Improvement... 1/10<sup>th</sup> of 1% is just fine!
  - Identify your Customers Value Added Proposition
  - Baseline Your Metrics (are thy the right ones?) and Take Baseline Video and Pictures
  - Figure Out Your Customer Demand and Takt Time
  - Practice the Three As
  - Process Map Every Step Your Patient or Product Takes
  - Make a List of All the "Dissatisfiers" in Your Area or Steps You can Eliminate Simplify or Combine
  - Develop a Vision For Your Area and Set Continuous Improvement Goals
  - Identify The Gaps
  - Make a Top Ten List of Improvements You Would Like to Make
  - Develop a Quick Wins List and Implement It

#### Pull on Any Available Lean Resources For Help But Don't Necessarily Wait For Them

©2014 Business Improvement Group LLC
